

Recycled glass

Close the loop by using recycled glass

Glass is one of the original and easiest materials to recycle without losing quality. There is no reason we should throw glass into our landfills as we can turn waste glass back into a new usable collection.

Collection

The glass is collected (recycle bin), sorted by colour and washed to remove impurities.

Processing

Glass is crushed and then mixed with the raw materials to colour and/or enhance properties as necessary.

New products

Glass mixture is melted in a heater and then molded or blown into new glass bottles or jars.

Recycled glass

Glass is one of the original and easiest materials to recycle without losing quality. There is no reason we should throw glass into our landfills as we can turn waste glass back into a new usable collection.
