

Recycled stainless steel

Stainless steel is a long-lasting and versatile material that can be recycled indefinitely without losing its properties. Recycling stainless steel requires significantly less energy and fewer resources compared to new stainless steel. This reduces the environmental impact of its production and extends its lifespan.

This recycled material can be transformed into a wide range of new products, such as bottles, tumblers, mugs and cups. On the inside, these items have the insulation benefits that keep beverages hot or cold, while on the outside they can be coated with different materials, like wood, to create a unique feel and look.

Recycled stainless steel

With our recycled stainless steel items you have plenty of options to get inspired and to showcase your brand in style while supporting an eco-friendly lifestyle.
